1910

Estr. dagli *Atti della R. Accademia delle Scienze di Torino*. Vol. XLV.  
Adunanza del 5 Dicembre 1909.

Nelle tavole che seguono, sono raccolti i risultati delle principali Osservazioni Meteorologiche fatte all'Osservatorio della R. Università di Torino nell'anno 1908.

Le notazioni e i simboli usati sono quelli che si adoperano generalmente: la forza del vento è espressa nella scala 0—4; la nebulosità del cielo nella scala 0—10.

Le meteore sono indicate coi simboli internazionali proposti dal Congresso di Vienna ed ora adottati comunemente:

Pioggia . . . . .	●	Temporale . . . . .	K
Neve . . . . .	*	Temporale lontano . . . . .	T
Nevischio . . . . .	△	Lampi senza tuoni . . . . .	Λ
Grandine . . . . .	▲	Lampi e tuoni . . . . .	Λ
Nebbia . . . . .	≡	Vento forte . . . . .	F
Nebbia all'orizzonte . . . . .	≡≡	Vento fortissimo . . . . .	F+
Brina . . . . .	<	Uragano di neve . . . . .	+O
Gelo . . . . .	⌈	Alone solare . . . . .	S
Gelicidio . . . . .	⌈ 2 1	Alone lunare . . . . .	L
Rugiada . . . . .	⌈ 2 1	Corona solare . . . . .	C
Aghi di ghiaccio . . . . .	⌈ 2 1	Corona lunare . . . . .	C
Caligine . . . . .	8 0	Arco baleno . . . . .	(

Le nubi vengono specificate con le abbreviature: *Ci* = cirri; *Cu* = cumuli; *S* = strati; *N* = nemi; *Ci-Si* = cirro-strati; *Ci-Cu* = cirro-cumuli; *S-Cu* = strato-cumuli; *Cu-N* = cumulo-nemi. Quando si scorgono più forme di nubi, queste si notano nell'ordine della loro predominanza.

Gli esponenti <sup>0</sup> e <sup>2</sup> o <sup>3</sup> indicano che la meteora alla quale si riferiscono, è di poca intensità, oppure forte o fortissima; la lettera *n* ed i numeri *I*, *II*, *III* significano che la meteora è stata osservata nella notte oppure verso le 9, le 15 o le 21.

Le ore sono contate da una mezzanotte all'altra in tempo medio dell'Europa Centrale.

I valori medi giornalieri sono ottenuti prendendo la media dei valori osservati alle 9, alle 15 e alle 21; fuorchè per la temperatura, che è ottenuta facendo la media dei valori estremi e delle temperature osservate alle 9 ed alle 21.

I dati relativi alle precipitazioni ed all'evaporazione di ciascun giorno si riferiscono al periodo di tempo che decorre dalle ore 21 del giorno precedente alle 21 di quello indicato.

Nell'ultima tavola sono confrontati coi valori normali i risultati ottenuti in quest'anno, ai quali furono già applicate le correzioni di cui tratta il Dr. Rizzo nella Nota alle Osservazioni meteorologiche eseguite nel 1894.
